# HCL Volt MX

Beautiful Apps. Transformation Delivered.

HCL Volt MX is an industry-leading low-code platform for building mobile and multiexperience apps. Our platform improves developer productivity, creates better app experiences cost-effectively, and helps you build innovative experiences that meet constantly evolving customer expectations.
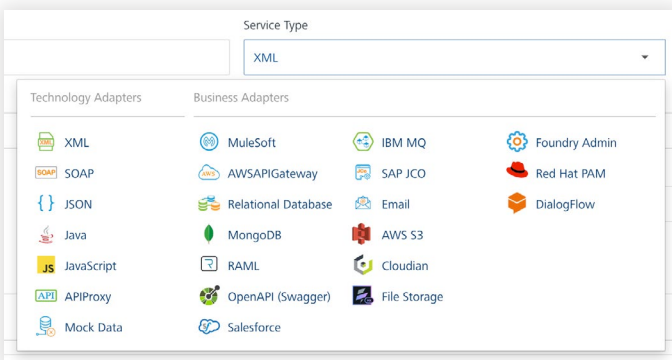

Build Once, Deploy Everywhere.

Deliver beautiful apps across multiple channels in the form of progressive web apps and native mobile apps — and across any device, even wearables and kiosks — on one cloud-native platform. Using a single code base, build apps with no limits on user experience and at any scale or complexity.
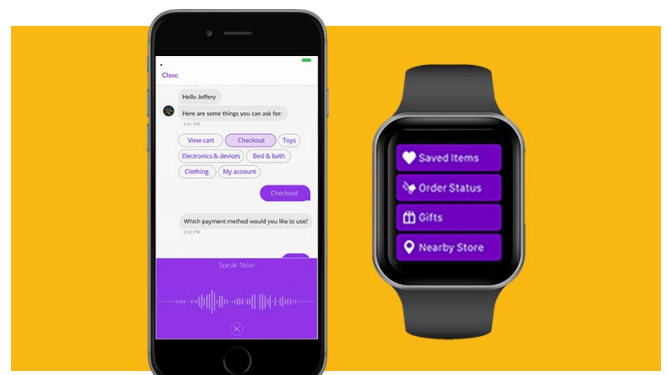

Integrations Without Limits.

Remove backend complexity and unlock existing data and business processes to reduce time to market by more than 60%. HCL Volt MX provides a set of powerful back-end runtime services that enable the use of connectors to quickly integrate data, create new services, and configure back-end business processes.

Innovative Interactions. Meaningful Engagement.

Stay ahead of the competition by captivating and engaging your users in new ways. HCL Volt MX provides a single platform that supports AI and machine learning in conversational apps, wearables, VR and AR experiences, and more.

HCL Volt MX

Key Features and Benefits

Features	Benefits
App delivery — fast.	Our low-code development environment provides rapid, visual assembly and pre-built backend services so you can build robust solutions in weeks instead of months.
Build and manage business processes with ease.	Design business rules, integrate third-party services, automate basic decisions, write complex logic, incorporate human interaction, and more. Our low-code approach to visually building back-end business processes makes managing complex workflows simple.
Built-in analytics.	Turn data into strategy. Our customizable dashboards come with custom and prebuilt analytics including reports on device and app usage, policy compliance, and user journey event tracking.
Effortless security.	Get data and identity protection with enterprise-grade security certifications. Enables multi-layered security for both client applications and back-end services in a single click.
Automated testing & DevOps.	Reduce time and effort spent on testing with automated testing capabilities that easily integrates with your existing infrastructure.
